## About Me

Senior UI developer with 10+ years of experience building responsive, accessible web interfaces using HTML, CSS, and SCSS. **Recently transitioned into Python development with a growing portfolio of personal projects**, showcasing solid understanding of Python fundamentals, scripting, and beginner automation.

## Education

**BACHELOR OF ARTS**
*CCS UNIVERSITY*                                                    2006 - 2008

**Certificate Course in Multimedia And Web Designing**
*OXFORD SOFTWARE INSTITUTE*                              2010-2011

**Python & Django Course**
*Code With Harry*                                                  May 2025

**Python for Beginners**
*Simplilearn - Online Certification Course Provider*    June 2025

## Experience

**Senior UI Developer**
*Various Companies – Delhi, Gurugram*                   2012 - May 2025

- Built and maintained responsive UIs using HTML, CSS, SCSS and guided a team of junior UI developers to deliver scalable web interfaces.

- Used Git/GitHub for version control and workflow management

**Python Developer**
*Looking for opportunity*                                          2025

- Completed Simplilearn's Python for Beginners course, covering core Python concepts, along with basic libraries like NumPy and Pandas.

- Developed interactive Python applications, including a math quiz game and a Mad Libs-style story generator, demonstrating proficiency in logic and user input handling.

# GitHub Profile

- Built a Django web application, applying MVC architecture, templating, and routing to create a functional project.

- Utilized Git and GitHub for version control and project management, maintaining clean codebases and collaborating effectively.

## Python Projects

### 🐍 Voice Assistant – Nova

- A voice-activated assistant capable of recognizing speech, responding with voice, performing online searches, playing music, reading news, and answering questions using Google Gemini.

- GitHub: https://github.com/developedbyrk/voice_assistant

### 🐍 Random Math Challenge

- A simple Python-based math quiz game that generates random math problems and tracks how quickly you can solve them.

- GitHub: https://github.com/developedbyrk/random-math-challenge

### 🐍 AI Chat Bot Auto Responder

- An AI-powered auto-responder chat bot that simulates human-like replies using Google Gemini. It reads chat messages directly from the screen, identifies the sender, and automatically types a short, realistic response into the chat input.

- GitHub: https://github.com/developedbyrk/AI-Chat-Bot-Auto-Responder

### 🐍 ⚙ Django Practice Project

- Built a responsive multi-page website using Django. Implemented template inheritance, static file management, and a dynamic gallery using Django's {% for %} loop. Integrated a contact form that saves entries to the database and displays them in the Django admin via a custom model.

- GitHub: https://github.com/developedbyrk/django-first
